BEST PRACTICES

GUIDE TO BEST USE PRACTICES FOR A GREATER PROBABILITY OF SUCCESS IN THE USE OF QTRADING BOT:

SCHEDULES AND TIME ZONE

- Have the computer with the time of the country I am in (use the UTC of the country I am in), the BOT will take the time of the computer
- Have the IQoption at the same time as the computer and the BOT
- Check that there is no delay between the BOT and the IQoption, **essential** to be able to operate cleanly
- If I am going to load signals for it to operate with signals, I must convert the time of the signals to the time of the country.

- Checking the news will always make us more likely to succeed, the BOT takes some into account but it is always good to review them manually before operating.
